Hiring Team

Frontend Engineer Role

Dear Hiring Team,

I am writing to apply for the Frontend Engineer position. What draws me to this role is that you are building AI agents for job search — a space I have experienced from both sides: as a job seeker using tools like yours, and as a developer building AI-powered web experiences.

My recent project is a React + TypeScript AI web application focused on clean UI, smooth interactions, and responsive design: <https://b-1-o.github.io/AI/>. This work reflects the same priorities I would bring to your team — polished interfaces that make complex AI capabilities feel simple and approachable.

I work confidently with HTML, CSS, JavaScript/TypeScript, React, and REST APIs. I am comfortable with version control, debugging, and shipping production applications to Vercel. I am authorized to work in the United States and available to start immediately.

I would welcome the opportunity to contribute to a product that helps people navigate one of the most important and challenging processes in their careers. Thank you for your time and consideration.

Best regards,

Erik Ghabuzyan
