Mindsize Team

Frontend Engineer (React / Next.js)

Dear Mindsize Team,

I am writing to apply for the Frontend Engineer (React / Next.js) role. I have been building production React and Next.js applications for the past year — most recently an AI-powered web experience in React + TypeScript focused on interactive UI, smooth animations, and responsive layouts: <https://b-1-o.github.io/AI/>.

What draws me to this role is the focus on React and Next.js specifically. That is the stack I have been working in daily — component architecture, REST API integration, state management, responsive design, and shipping to Vercel. I care about clean, maintainable code and how an app feels under real usage, not just how it looks.

I am based in Los Angeles (Pacific Time) and comfortable with the 9am–5pm Central schedule — that is 7am–3pm PT for me, and I have been working West Coast hours my entire career. I am authorized to work in the US, available to start immediately, and open to the posted salary range.

Thank you for your time and consideration. I would welcome the opportunity to contribute to your team.

Best regards,

Erik Ghabuzyan
